

Google has released a separate app for its AI on Android and iOS

Now, Workspace subscribers can download the app from the Google and Apple app stores. Gemini's features include identifying handwritten notes using the phone's camera and exporting them to Google Docs or Gmail.

However, some features are currently unavailable, such as file uploads, specialized modules, and extensions for Gmail, calendar, and other apps. Additionally, Android users cannot access Gemini through Work Profile. Some limitations apply.

The program includes Workspace levels such as Business Starter, Enterprise Plus, and Education Fundamentals. Google plans to make the app widely available in the coming weeks.
