

Rumor: Samsung will release One UI 8 sooner than expected due to Android 16

Insiders from GizmoChina, while analyzing the code base of “some system applications” of Android 16, found references to One UI 8. No details are provided, but it is noted that references within the code usually appear when development is being prepared or has already begun.

According to insiders, Samsung developers are likely to hurry, as Android 16 is already in full development, and One UI 8 will be based on this operating system. Therefore, One UI 8 will be released much earlier than “we think.”
