

Models of tractors “John Deere” and “Case New Holland” were displayed in the exhibition hall of the National “Ak Bugday” Museum in Anau, attracting special interest. These technologies play a key role in advancing Turkmenistan's agriculture and are considered an important part of commercial cooperation between the USA and Turkmenistan.

American innovation provides a new level of development for Turkmen agriculture through modern machinery. Advanced technologies like “John Deere” and “Case New Holland” enhance the productivity of the nation's farmers. Such investments strengthen economic cooperation between the two countries.

This collaboration opens up new opportunities not only in the agricultural sector but across all areas of the economy, benefiting both sides. The introduction of new technologies aids in achieving high efficiency in agriculture and brings more favorable conditions to Turkmen farmers.

The display at the “Ak Bugday” Museum showcases the results of friendship and

cooperation, while also contributing significantly to the development of new economic and trade opportunities.
