

The next generation of Oppo Reno 14 smartphones will feature flat screens, metal frames, and full water resistance.

This was reported by the insider Digital Chat Station. The design will be more streamlined and practical—aligning with recent market trends.

In addition to the flat screen, key innovations will include a periscopic telephoto camera and, according to rumors, water resistance rated at IP68 or higher—a first for the Reno series. The lineup will also retain its lightweight and compact build.

The announcement is expected in the first half of 2025. The series will include at least two models—Reno 14 and Reno 14 Pro. Prices will remain at the Reno 13 level: starting at 2,699 yuan (31,000 rubles) for the base version and 3,299 yuan (38,000 rubles) for the Pro.

Specifications have not yet been confirmed, but the Pro version is likely to see upgrades compared to the Reno 13 Pro: a Dimensity 8350 chip, a 6.83" display with a 120 Hz refresh rate, a 50 MP triple camera, and a 5,800 mAh battery with fast charging.
