

In 2025 as the “International Year of Peace and Trust” and in celebration of the World Environment Protection Day, as well as on the occasion of the glorious 30th anniversary of Turkmenistan’s eternal neutrality, we invite you to participate in the international scientific project competition “The Role of Youth in Achieving the Goals of Sustainable Development,” to be held among students of higher education institutions in our country and abroad!

The S.A. Niyazov Turkmen Agricultural University is hosting the international scientific project competition “The Role of Youth in Achieving the Goals of Sustainable Development” from June 2 to 6, 2025, and invites the students of your higher education institution to take part.

We firmly believe that this international competition will help strengthen friendly relations among students and lecturers from various countries and provide an opportunity for the mutually beneficial exchange of scientific information, contemporary research, and issues related to both theoretical and applied science.

The official languages of the competition are Turkmen, English, and Russian. The competition is focused on food security and environmental protection within the framework of the Sustainable Development Goals adopted by the United Nations.

Additional information and announcements regarding the international competition will be posted on the university’s official website at tohu.edu.tm.

Competition Topics:

The competition will be organized in several categories and will help young researchers engaged in scientific work showcase their talents. These include:

- **Eradicating Hunger** – ensuring food security, improving the quality of nutrition, and supporting the sustainable development of agriculture.
- **Clean Water and Sanitation** – ensuring the accessibility of water resources and their rational usage.
- **Affordable and Clean Energy** – achieving reliable, cost-effective, sustainable, and modern energy sources for everyone.
- **Climate Action** – taking prompt and targeted measures to combat climate change.
- **Life Below Water** – protecting oceans, seas, and rivers and ensuring their sustainable utilization.
- **Life on Land** – promoting the sustainable use of forests, combating desertification, and preventing the loss of biodiversity.
