

Folding iPhone with a small external screen will be released by the end of 2026 - forecast

Rumors about the folding iPhone have been going on for a long time, and now analysts from TrendForce expect Apple to release the novelty in the second half of 2026. According to the latest data, the device will receive an internal screen size of 7.8 inches and a "compact" external display - only 5.5 inches.

This is even less than that of the first Pixel Fold (5.8 inches) and much less than that of the new Samsung Galaxy Z Fold 7 with a 6.5-inch screen.

According to rumors, Apple can abandon Face ID in favor of the side scanner of fingerprints. Two cameras of 48 megapixels and a special joint from titanium and "liquid metal" are also expected - it should be strong, but light.

There is no accurate price about price.
