

The head of Google Sundar Pichai said that artificial intelligence has a positive effect on all directions of the company. According to the results of the second quarter of 2025, Alphabet revenue increased by 14% compared to last year and amounted to \$ 96.4 billion, of which \$ 54.1 billion fell on the Google search engine.

The company plans to invest up to \$ 85 billion in development – \$ 10 billion more than before. These funds will go to the construction of data centers and the purchase of servers in order to cope with the growing demand for cloud technologies.

From another: AI-functions, such as AI OverViews and Ai Mode, show good results. AI OverViews is already using more than 2 billion people in 200 countries, and AI Mode – over 100 million in the USA and India. The Gemini application has 450 million active users, and the number of daily queries has increased by more than 50% compared to the first quarter.

At the same time, Google still expects a decision on the antitrust case from the US Ministry of Justice, where the court had previously recognized the company as a monopolist. Possible consequences – up to the separation of business.
