Google officially released the Gemini voice assistant for all smart watches with Wear OS 4 and newer.

Now Pixel Watch, hours Samsung, Oppo, OnePlus, Xiaomi and other models can use it.

Gemini replaces the outdated Google Assistant. After updating through the Play Store, users will see the Gemini notification on your watch.

You can activate the assistant with a voice ("Hey Google"), a long press of the button, through the icon, dial or widget Tile, which received an updated design in the style of Material 3.

9to5google

Gemini understands more natural voice teams and knows how to respond not only in a voice, but also with text or images. He also offers fast assessment and feedback buttons.

The main advantage is expansion support. Using Gemini, you can search for Google, send messages, launch YouTube Music, manage a calendar, lay routes in Maps and even work with Gmail.
