

Gsmarena recognized Xiaomi Smart Band 10 The best in the series:
Bright screen, accurate pulsometer and 10 days of work

Gsmarena recognized Xiaomi Smart Band 10 the best model in the series in recent years.

The new fitness bracelet received a 1.72-inch amoled display with a brightness of up to 1,500 threads and a frequency of 60 Hz, which provides excellent readability in the sun. An important improvement was a more accurate pulse measurement thanks to updated sensors.

In addition, the device offers tracking sleep, oxygen in the blood, more than 150 sports modes and a vibration engine with tuning of responses.

According to the review, the bracelet is able to work up to 10 days with activated Always-on Display and the sensors turned on, which Gsmarena noted as a strong side of the novelty.

The new ceramic version is distinguished by a premium design, although the weight has increased compared to the aluminum model.

The lack of GPS module was attributed to the disadvantages, the inability to respond to calls, and also not the most accurate work of sleep monitoring. Nevertheless, the Smart Band 10 was recognized as the optimal choice thanks to the bright screen, high -quality assembly, accurate pulsometer and prolonged autonomy.

Recall that the price of the device starts with \$ 69.
