

Lenovo showed the smart watch Watch Pro: 1.43 "Amoled, 70 types of training and up to 20 days of autonomy

Lenovo officially introduced in China the new smart watches Watch Pro - an affordable device with attractive characteristics.

The main feature of the novelty was the 1.43-inch AMOLED display with a resolution of 466 × 466 pixels, protected by hardened glass designated as "Crystal Diamond". The clock is made of an alloy of zinc and magnesium.

Watch Pro offers an expanded set of health and fitness functions: a pulse measurement, blood oxygen level (SPO<sub>2</sub>), as well as advanced sleep analysis. For sports, more than 70 training modes are provided.

One of the key advantages of the device was autonomy: with moderate use, the clock can work up to 20 days, and in standard mode - up to 18 days.

**1.43 inches**

**AMOLED**

7H solid explosion-proof screen

**Savvy algorithm**

70+ sports modes

**Offline double payment**

**Support WeChat/Alipay**

Save time, effort and worry
