

Mark Zuckerberg called smart glasses “future personal intelligence”

Chapter *META Mark Zuckerberg is sure that smart glasses will become a key device for interacting with AI and displace smartphones as the main computing devices. He stated this during the company’s income report for the II quarter.

Glasses with cameras, microphones and displays are ideal for interaction with AI. In the future, the absence of such glasses can put a person in a seriously unprofitable position.

Mark Zuckerberg

Earlier on the same day, he published a letter on the *Meta blog, where he called AI, capable of understanding the user’s goals and helping in their achievement, “personal super-prize”.

*META actively develops a line of wearable devices, including smart glasses Ray-Ban and partnership with Oakley. Glasses allow you to listen to music, shoot photos and videos, as well as get tips from AISSTENT.

According to Zuckerberg, sales of such devices are accelerated that Reality Labs helped increase the revenue by 5%.

*META also invests billions in the attraction of AI-talents-in particular, \$ 15 billion were invested in Scale AI.
