

When the NVIDIA released the RTX 3050 in 2022, it became a budget video card suitable for modern games with support for rays and DLSS. It was expected that it would quickly lose relevance, but after three years she continues to remain in the market. In the new version of the GPU-Z program, a mention of the modification of RTX 3050 A.

This will be the fifth version of this video card. First, NVIDIA released models with 4 GB and 8 GB of video memory, and then added new versions with 6 and 8 GB. RTX 3050 A uses a newer ADA LoveLace architecture, the same as that of the RTX 4060 series cards.

The new version may appear on sale in the near future, but it is not yet clear whether it will be intended for PC or laptops.
