

Readers Gsmarena called OnePlus Nord CE5 "The worst smartphone of summer"

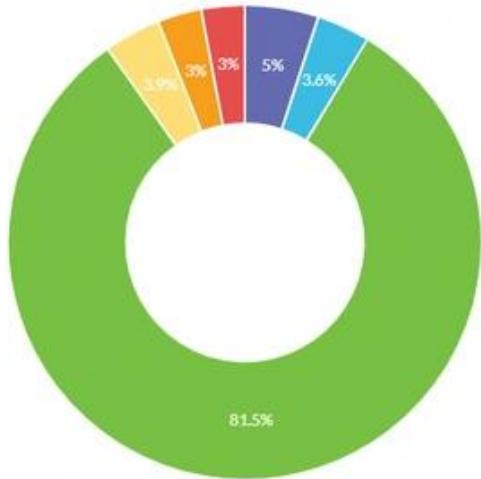

According to the results of a fresh GSMarena survey, OnePlus Nord CE5 received the title of "The worst smartphone of summer".

The model was sharply criticized by users - 81.5% of respondents expressed dissatisfaction with its technical characteristics, and only 5% of respondents are ready to consider the purchase of a device without reservations.

The Nord CE5 is equipped with a MediaTek Dimensity 8350 APEX chip, which, according to users, suffers from a weak cooling system.

At the same time, the smartphone is equipped with a 5200 mAh battery with a fast charging 80 W - not the most outstanding indicator by the standards of 2025, especially considering that the Indian version has a 7100 mAh battery.

Will you buy the OnePlus Nord CE5?

Choice	Total
• Yes, I want one	126
• Maybe, it depends on reviews	91
• No, I don't like the hardware	2041
• No, not at this price	97
• I don't want a mid-ranger	75
• None of the above	74

GSMarena

The price of the device starts from € 319, which also caused a negative reaction.

Not much better than the more advanced OnePlus Nord 5. Only 9.6% of the survey voted for its purchase. 44% called the "iron" insufficient, and 38.2% - an overstated price.

As a result, both new products of OnePlus met a cool reception of the audience and risk falling into sales.
