Over the past year, the number of domestic IT solutions for the construction industry has doubled. Now the house is in the registry. The Russian Federation registered 875 products from 460 Russian developers covering more than 10 areas of development of development companies.

According to Nikolai Kozak, managing director of the house. The Russian Federation on IT and digital transformation, the register allows you to select digital solutions for automation of construction processes. More than half (56%) of the submitted programs are included in the Unified Register of Domestic software.

Research House. The Russian Federation and Skolkovo showed that 39% of developers are faced with a lack of Russian analogues of specialized software. The new register is designed to solve this problem by offering solutions to search for land, engineering surveys, project management and assessment of construction costs.
