

An immunologist allergologist Nadezhda Login told O possibly the most dangerous form of allergies to medicines. He warned that drug allergies could be deadly.

An allergic reaction to medications can occur suddenly and lead to anaphylactic shock. According to the doctor, the immune system remembers information about substances that caused allergies, and this can lead to a second reaction.

For the treatment of drug allergies, the method of autolymphocytotherapy can be used. "Antibodies are produced by lymphocytes, that is, when meeting with allergen, it is no longer scary, because there will be protection," the expert said.

Logina emphasized that allergies are curable, it is extremely important to seek medical help.
