

## The flagship without Leica: Honor will refuse partners and rely on Aimage at Magic 8 Ultra

Honor is preparing to present the flagship series Magic 8, and, according to the last leaks, we are waiting for the debut of the Ultra model – for the first time in the history of the line.

Previously, she appeared only in rumors, but now, judging by the Digital Chat Station insider, its launch will really take place.

The main feature of the Magic 8 Ultra is a rejection of partnerships with brands like Leica. Instead, Honor relies on its own Aimage image processing system. She will open the way for the new gland and AI-functions that were previously inaccessible.

According to rumors, the smartphone will receive the Snapdragon 8 Gen 2 Elite (SM8850) chip, the main OMNivision Lofic sensor and a 200 MP object-lens periscope. Despite the fact that the 1-inch matrix will not be used, the head of the Honor Lo Wei photo administration promised “the chamber experience that no one has yet seen.”

It is expected that first the company will present the usual Magic 8 and 8 Pro, and the Ultra model will be shown later – probably in October. The line will be both the MediaTek Dimensity 9500 chips and the flagships from Qualcomm. Details about the battery and screen have not yet been disclosed.
