

The head of Google appreciated the recent partnership with the “main” and company Openai

Google General Sundar Pichai said that Google Cloud's cooperation with Openai, one of the main competing companies, Google in the field of artificial intelligence. As part of this partnership, Openai will use Google cloud computing capacities to teach and work its models.

Despite competition, Openai recently added Google Cloud to the list of her cloud service providers, along with Microsoft and Oracle. Why do companies choose Google Cloud? Thanks to its powerful NVIDIA graphic processors and its own TPU chips. For Openai, this is a profitable solution, since she just lacks access to NVIDIA capacities.

This year, Google Cloud shows a significant increase in income - in the second quarter of 2025 they reached \$ 13.6 billion, which is 30% more than a year earlier.

Google also notes the success of its AI products: the Gemini chatbot already has 450 million active users per month, and the AI OverViews service is 2 billion.
