

The head of Nvidia praised Chinese AI models, calling them world-class technologies

The head of NVIDIA Jensen Huang at an exhibition in Beijing made a speech dedicated to AI technologies. Huang said that Chinese companies, such as Deepseek, Alibaba and Tencent, create world-class artificial intelligence technologies.

NVIDIA CEO emphasized that artificial intelligence is changing supply chains. His statement sounded against the background of information that NVIDIA would again begin to sell its popular H20 chips in China.

Huang has been visiting China for the third time within 2025. His visit took place a few days after the meeting with US President Donald Trump. Therefore, laudatory speeches to the Chinese models of AI in the industry are considered non -accident.

According to Reuters, NVIDIA balances between the two largest economies in the world, fighting for world domination in the field of AI and other advanced technologies.
