

A recent leak revealed new images and details about the Pixel 10 series and its accessories. Among them are the Pixel 10 Render without a case with a connected Qi2 exercise, which indicates built-in magnets in the phone.

Earlier there were rumors that magnets could only be in covers, but now it looks like they would be in the device itself. The reliable insider Evan Blass published Pixel 10 Renders, Pixel 10 Pro and Pixel 10 Pro Fold with their technical characteristics. In addition to phones, the leak shows Pixel Watch 4 and Pixel Buds Pro 2 in new colors - Moonstone, Iris and Obsidian.

Last month, information appeared about the Google project called Pixelsnap - the Ecosystem of Accessories with Qi2 support. New images confirm that Pixel 10 will be able to use this technology thanks to built-in magnets.

The official presentation of the Pixel 10 series will be held on August 20 at the Made By Google event, and the first sales will begin on August 28.
