

## The Ministry of Transport announced the finalization of the National Digital Transport Platform

The Ministry of Transport of Russia plans to finalize the concept of the national digital transport and logistics platform, focusing on the role of business in its implementation, stages of creating and integrating with electronic government infrastructure services. This was reported to RIA Novosti in the press service of the ministry.

Earlier, Russian President Vladimir Putin, speaking at the PMEF in June 2022, noted that the state system of electronic transportation documents has been implemented in the country, which allows you to draw up all the main papers for cargo transportation in electronic cars. The head of state emphasized that the entire transport circuit of Russia, including road, air, rail, river and sea transport, will be transferred to digital technologies and platform solutions. Thus, we are talking about creating a national digital transport and logistics platform.

At the current stage, the Ministry of Transport received an order from the government to finalize the concept of the national digital transport and logistics platform, taking into account the need to create a platform solution to reduce logistics costs.

“As part of the refinement of the concept, more attention will be paid to the role of the business in the NCTLP created, the stages of its creation, as well as the conjugation of the infrastructure of the electronic government,” the Ministry of Transport’s press service said.
