

The Oppo Find X9 Ultra will be a flagship with two periscopes and Snapdragon 8 Elite 2

According to the leakage from the famous Digital Chat Station insider, the future flagship of the Oppo Find X9 Ultra will be the only smartphone based on the Snapdragon 8 Elite 2, which will receive two periscope chambers.

Find X9 Ultra will have four rear cameras created together with Hasselblad. The main sensor is 200 MP, and the remaining three are 50 megapixels each. Among them are two periscope cameras for the zoom and one super-richell.

Why do you need two cameras with a zoom? This allows you to shoot at different distances without loss of quality and digital increase. This approach gives more flexibility and the best quality of photos when switching between approximation levels.

It is also expected that Find X9 Ultra will receive a flat 2K display, will work on Coloros 16 (based on Android 16) and will be released in early 2026 along with the X9S version. Find X9 and X9 Pro models may appear until the end of 2025.
