

Sberbank has expanded the Sber Bounty vulnerabilities search program, including an Internet banking business business in it. Now independent security researchers can check the service web version of the service and the mobile application for Android for the availability of potential

The program provides for remuneration for the discovered vulnerabilities - from small amounts for minor flaws up to 500 thousand rubles for critical safety problems. This stimulates cybersecurity specialists to carefully check the bank systems.

As Anna Loevskaya from Sberbank noted, customer safety remains a key priority for a financial organization. Attracting external experts will help to quickly identify and eliminate potential threats.

BI platform. Zone Bug Bounty, on which the program is posted, is already successfully collaborating with a score in other directions. The list of checks in the checks includes Sberbank Online, Sberinvestifications, as well as smart devices and anti -minor systems.
