

The host of the Technomax YouTube channel told what allegations about laptops for gamers are just myths.

**You can not play on gaming laptops, as they overheat.** In fact, every new generation of microcircuits with a thinner process can work with higher frequencies and temperatures. As for AMD and Intel, it is important to maintain a laptop in time to prevent tottering.

**AMD - cold, Intel - hot.** Each of these manufacturers has at least three processors. You just need to compare the models of the same price categories. For example, when comparing medium -sized lines, AMD is better, and when comparing workstations, Intel.

**Each game laptop needs a cooling stand.** In fact, their effectiveness is low. It reduces the temperature by only 2-3 degrees.

**Only a video card is important for a game laptop.** There are games that are strongly dependent on the processor. These are, for example, Total War, Microsoft Flight Simulator, CS2 and others.

**A desktop PC will always be faster than a laptop.** If you compare a laptop and a computer for 200-300 thousand rubles, then, of course, the PC will be much more powerful. But many buy a laptop or PC for 100 thousand rubles maximum. And for 60-70 thousand rubles, you can now take a laptop with RTX 4060, 4070, and you can't get the same performance for the same money when assembling a desktop computer.

## ПРОЦЕССОРОЗАВИСИМЫЕ ИГРЫ

(Игры с большим количеством NPC, физики, ИИ; стратегии, симуляторы, с расчётом в реальном времени; киберспортивные игры)

- 👉 **Total War (серия)** - много юнитов, расчёт сложного ИИ.
- 👉 **Cities: Skylines II** - просчёт инфраструктуры, трафика.
- 👉 **Microsoft Flight Simulator (серия)** - сложная физика и симуляция мира.
- 👉 **Arma 3** - много расчётов, ИИ, NPC, физика.
- 👉 **CS 2** - игра сильно зависит от производительности на 1 ядро.  
Чем выше частота — тем лучше FPS и ниже Input Lag.
- 👉 **И другие...**

Technomax

**Full HD for gamers is better than 2.5k.** If you buy an expensive laptop that you are going to use not only for games, then it is better to have higher resolution.

**The laptop cannot be upgraded.** In most game models, you can easily replace the SSD, add more RAM, change Wi-Fi-module.

**Chinese laptops are bad, branded better.** If you remove from the top by the number of laptops produced by the Chinese and Taiwanese, then only Apple, HP and Dell will remain. In addition, with a breakdown of models from Colorful, Maibenben, Haier, Thunderobot, Machenike, it will be possible to easily replace spare parts in a few years, but with Lenovo, Asus, HP, it is more difficult to do.

**China has cheap laptops, and in Russia expensive.** The real difference in the price of laptops in Russia and in China is logistics, delivery. Usually it is 30-40%. Despite this, service, warranty will be available to you. Therefore, it is better to buy laptops in the Russian Federation.

**Gaming laptops do not exist.** Today, the proportion of gaming laptops is growing all the time, and game computers are reduced. Most likely, this is precisely due to the mobility of

laptops.
