

The host of the Technozon YouTube channel told which routers are best now buying in China if you need the maximum coating.

GL.inet FLINT 2 and GL.inet GL-BE9300 (FLINT 3). GL.inet FLINT 2 is a router that has a coating area more than Xiaomi. But he has Wi-Fi 6, not 7. If you need Wi-Fi 7, then take GL.inet GL-BE9300. He has almost all the functions that are now needed, including the VPN, but the company is still finalizing it.

Xiaomi Ax3000t. A cheap good router. He has a huge number of different firmware, improvements, and this is for only \$ 30.

Xiaomi BE7000 or BE10000. Both routers provide a large coverage area, work stably, have Wi-Fi 7, 4K. But they are quite expensive.

The screenshot shows the AliExpress website interface. At the top, the AliExpress logo is on the left, a search bar with the text "xiaomi be5000 wifi 7" is in the center, and a search icon is on the right. Below the search bar, the product page for the "Xiaomi Router 7000" is displayed. The main image shows the router with the text "Xiaomi Router 7000" at the bottom. To the left of the main image is a vertical strip of smaller images showing different views of the router. To the right of the main image, there is a red banner that says "Save US \$153.84". Below this, the price "US \$142.01" is shown in large black text, with "Tax excluded, add at checkout if applicable" in smaller text below it. The product name "Xiaomi Mi Router BE7000 7000" and specifications "USB 3.0 IPTV 4 X 2.5G Ethernet" are listed. Below this is a star rating of 4.9 with 330 reviews. A section titled "Bundle: Add EU Adapter" contains two buttons: "Add EU Adapter" and "US Plug". Below this, the color "Color: router" is selected, and a small image of the router is shown.

Technozone

Xiaomi BE5000. It is almost the same as 3600, but works on MediaTek. By coating and capabilities, you will receive the same as with the younger version – the only difference in the processor.

Xiaomi B3600 or BE3600 Pro. V3600 has a base Wi-Fi 7, the support of two providers and not only. In general, this is a basic Chinese router that works perfectly directly from the box. The Pro version will be more expensive, but this is almost the same as the usual ve3600.
