

The host of the Technozon YouTube channel told which routers are best now buying in China if you need the maximum coating.

GL.inet FLINT 2 and GL.inet GL-BE9300 (FLINT 3). GL.inet FLINT 2 is a router that has a coating area more than Xiaomi. But he has Wi-Fi 6, not 7. If you need Wi-Fi 7, then take GL.inet GL-BE9300. He has almost all the functions that are now needed, including the VPN, but the company is still finalizing it.

Xiaomi Ax3000t. A cheap good router. He has a huge number of different firmware, improvements, and this is for only \$ 30.

Xiaomi BE7000 or BE10000. Both routers provide a large coverage area, work stably, have Wi-Fi 7, 4K. But they are quite expensive.

The screenshot shows the AliExpress product page for the Xiaomi Router 7000. At the top, the AliExpress logo is on the left, and a search bar contains the text "xiaomi be5000 wifi 7". To the right of the search bar is a magnifying glass icon. Below the search bar, the main product image shows the Xiaomi Router 7000, a black router with five antennas, set against a blue background with the Xiaomi logo in the top left corner. To the left of the main image is a vertical strip of six smaller images showing different views and features of the router. To the right of the main image, a red banner says "Save US \$153.84". Below this, the price "US \$142.01" is displayed in large black font, with the text "Tax excluded, add at checkout if applicable" underneath. The product name "Xiaomi Mi Router BE7000 7000" and specifications "USB 3.0 IPTV 4 X 2.5G Ethernet" are listed. Below this is a star rating of 4.9 with 330 reviews. A section titled "Bundle: Add EU Adapter" contains two buttons: "Add EU Adapter" and "US Plug". Below this, the text "Color: router" is shown next to a small image of the router.

Xiaomi Router 7000

Technozone

Xiaomi BE5000. It is almost the same as 3600, but works on MediaTek. By coating and capabilities, you will receive the same as with the younger version – the only difference in the processor.

Xiaomi B3600 or BE3600 Pro. V3600 has a base Wi-Fi 7, the support of two providers and not only. In general, this is a basic Chinese router that works perfectly directly from the box. The Pro version will be more expensive, but this is almost the same as the usual ve3600.
