

According to rumors, Sony prepares 200 MP camera for Samsung and Oppo smartphones

Gizmochina insiders report that Sony is working on a new smartphone camera, which will have a very high resolution – 200 MP. This suggests that future smartphones from Samsung and Oppo will be able to take very clear and bright photos. It is known that the camera is developed for these brands.

There are rumors that the camera from Sony will be installed in the models of the Galaxy S26 Ultra and Find X9 Ultra.

Samsung plans to release a new top smartphone with a large sensor and a good diaphragm so that the photos turn out even in the dark.

Earlier they said that this will be the new Samsung ISocell HP2+Samsung sensor. But recently another information has appeared: Samsung already has 200 MP camera in the Galaxy S25 Ultra model. For Oppo, this will be an important step forward. In their previous Find X8 Ultra model there was a 50 megapixel camera, and in the new Find X9 Ultra model the quality of shooting can become even better.

According to the latest rumors, the Oppo Find X9 Ultra will have a special set for photography from Hasselblad. The new flagship of Oppo will probably have four cameras: one main for 200 MP and three additional for 50 megapixels each.

But it emphasizes that so far this information has not been confirmed.
