

Adobe integrated generative AI into PDF files. The developers presented the new functionality of the Adobe Acrobat Studio application and the new PDF space with personalized AISSisters. These assistants allow you to analyze documents, generate ideas and verify information, making interaction with PDF files more productive and interactive.

According to the TechSpot portal, the PDF format created by Adobe in 1993 became a universal standard for digital documents. Thanks to available free versions, Acrobat, PDF quickly entered everyday life and business.

Now “PDF-space” has appeared in Acrobat Studio to jointly work with AI-helpers. These assistants can analyze documents, generate ideas, check information and add comments. You can share both documents and assistants. Adobe vice-president for grocery marketing Michi Alexander noted: “We are returning the brand. We have existed for 32 years, but this is the most important turning point for us from the moment of founding. ”
