In Russia, they plan to use artificial intelligence to search and limit the prohibited content on the Internet. This was written by TASS with reference to the event plan approved by the Government.

For this work, AI technologies, neural networks and machine learning will be used. With their help, the system will be able to automatically find materials, access to which violates the law, and limit their distribution.

Control over this measure is assigned to Roskomnadzor, the Ministry of Council, the Ministry of Internal Affairs, the FSB, the Prosecutor General's Office and the Investigative Committee. There is no deadlines for work – check and restriction of content will be carried out constantly.
