

Amazon revealed the characteristics of the portable console ASUS ROG Xbox Ally ahead of time

Amazon accidentally published a page with the characteristics of the new portable console of the ASUS ROG Xbox Ally, thereby opening the details of the device a few days before the Gamescom 2025.

The leak confirms that the console will receive a 7-inch FullHD display with sensory control and update frequency of 120 Hz, a response time of 7 ms, as well as a brightness of up to 500 threads.

The novelty is based on the AMD Ryzen Z2 A processor with the Zen 5 architecture and the built-in graphics RDNA 3.5.

The model is equipped with 16 GB of RAM LPDDR5 6400 MHz and a 512 GB of M.2 format, which can be replaced with a more capacious. Windows 11 Home with a full access to the Xbox and PC-IGR library is used as an OS.

Additionally, the Xbox Game Bar and ARMOURY CRETE SE are provided for management. The design is inspired by the Xbox controller, and a 60 W battery is responsible for autonomy.

According to rumors, in Europe the console will cost € 599, and the more advanced version of the Xbox Ally X is € 899.
