

Anker SoundCore Sleep A30 with a snoring tracking function came out

Anker has released new Soundcore Sleep A30 headphones, specially created for sleeping. They are equipped with active noise reduction (ANC), effectively block snoring, animal noise, household sounds and street movement.

The peculiarity of the model is the Ear Canal Adaptation algorithm, which adjusts to the form of the user's ear, increasing noise reduction. The charging case is equipped with a microphone to analyze the surrounding noise. When headphones detect snoring, ANC is automatically adjusted to drown out this sound.

Anchor

Headphones can also play binaural frequencies, which, according to the company, help synchronize brain waves with soothing rhythms, contributing to "relaxation and deeper sleep." You can manage all functions through the SoundCore application, where you can also put an alarms and create reminders of sleep.
