

Anker will release a compact charger for 70 watts with 4 ports

Anker will release a new Zolo adapter with four ports. Information about the A121C model published @ankerinsider. The new adapter includes three USB-C ports, each of which is able to give up to 70 watts, and one USB-A Port is 22.5 watts. The total power of all ports is 70 watts.

When using two ports, the power will be about 67.5 watts, and when all four are turned on - about 64.5 watts per device. The design of the charger is compact, with a folding fork. It will be available in black and white. The estimated entry into the market is in 2026, the price is approximately \$ 50-60.

Like the other latest products Anker, Zolo uses Gan technology, which improves efficiency and reduces heating. The exact release date is still unknown
