

AOC introduced the fastest 1440p OLED monitor with a frequency of 500 Hz

AOC introduced Agon Pro AG276QKD2-the fastest 1440P monitor in the market. The novelty received a 26.5-inch QD-OLED panel with a resolution of 2560 × 1440 and the update frequency of 500 Hz.

This is one of the first monitors with such a high frequency paired with the OLED screen, because most models of 500 Hz still use TN or IPS matrix.

The panel was made by Samsung and has already met at the Samsung Odyssey Oled G6 and some solutions from Gigabyte and Philips.

The display has excellent color coating: 100% SRGB, 99% DCI-P3 and 98% Adobergb, as well as support for DisplayHDR 500 True Black and contrast 1,500,000: 1. Brightness - up to 1000 threads at the peak.

The monitor received adjustment in height, inclination and turn, built-in 5-watt speakers, as well as the ports of HDMI 2.1, DisplayPort 2.1 and USB-A. USB-C is absent. Adaptive-Sync, Freesync, burnout protection and corporate g-Menu are supported.

The prices and timing of the start of sales have not yet been announced, but it is expected that the AG276QKD2 will take premium niche among QHD monitors.
