

On August 14-15, at the Taxi International Eurasian Forum (MEFT-2025), the Atom company will present a special version of its electric car, adapted for work in taxi parking. The event will be held in Moscow and collect representatives of business, authorities and experts in the field of urban mobility.

The company noted that a taxi version will be produced in two versions: double and classic. The company noted that the electric car will be equipped with technologies for the convenience of drivers and passengers, including a spacious interior, smooth move and swing doors for a comfortable landing.

As part of the forum, the head of the atom development department, Irakli Lakrba, will take part in the discussion about the prospects of electricTaxi. Participants in the session will discuss the economy of taxi pork on electric vehicles, state support and requirements for localization of production.
