

In Russia, sales of electric toothbrushes Truver Fresh and Fresh Pro began. These models are equipped with pressure sensors based on artificial intelligence (AI), which help to control the cleaning process and prevent excessive effort.

Both versions received moisture protection, antibacterial coating and a battery that operates up to a month without recharging. The Smart Ring system with backlight reacts to pressing and, if necessary, reduces the intensity of vibration.

The Truver Fresh brush is designed for daily use. It provides up to 66 thousand vibrations per minute and a special movement at an angle of 66 degrees, which helps to remove the raid in hard -to -reach places. The kit includes two nozzles: soft for sensitive teeth and universal with a whitening function. The whole cleaning procedure takes about two minutes.

FIND

The flagship model Trouver Fresh Pro received a more complex vibration system with additional vertical movements. The device performs up to 69 thousand vibrations and almost

40 thousand pulsations per minute. The algorithm repeats the BASS methodology, which is considered the standard in dentistry. The brush supports ten intensity levels that can be configured through the Bluetooth mobile application. It also displays the statistics of the brushing and recommendations for the care of teeth.

Fresh Pro is equipped with wireless charging – just install it on the base. The cleaning time of this model is reduced to one minute due to higher power and additional modes of operation.

FIND

The brushes are available in different colors. Fresh is available in white and black versions, and Fresh Pro is in black and silver. The kit includes interchangeable nozzles, charger and user guide.

Truver Fresh is offered at a price of 6.5 thousand rubles, and Truver Fresh Pro is from 8.5 thousand rubles.
