

In 2025, the science 0+ festival celebrates its 20th anniversary, representing the anniversary exhibition "From silicon to cube: the path of humanity." The event organized by leading scientific centers in Russia.

The main theme of the festival is "Your Quantum Universe". This is due to the fact that the UN announced 2025 by the international year of quantum science and technology. Visitors will be able to go through seven halls, each of which will talk about the important stage of the development of science. The exposition presents layouts of ancient instruments, holograms of ancient inventions, the discoveries of the 19th century, the achievements of the XX century in atomic and quantum physics, as well as modern projects in the field of meganau and space.

Particular attention is paid to the contribution of Russian scientists and new technologies, such as neuro interfaces and quantum computers. The exhibition is completed by the "Laboratory of the Future" section, where the prospects of science are discussed, including quantum Internet and the colonization of Mars.

The festival is designed for everyone - from children to adults. Within its framework there are lectures, master classes, showing scientific films and meetings with scientists.
