

Geekbench tests confirmed the equipment of the Galaxy Tab S11 Ultra chipset Dimensity 9400+

Recent leaks about the chipset, on which the Galaxy Tab S11 Ultra tablet will work, were confirmed. The GSMArena portal with reference to the Geekbench 6.4.0 benchmark said that the tablet received the Dimensity 9400+ chipset.

This chipset is faster than the previous model, 9400, thanks to the cortex-X925 core, which operates at 3.73 GHz instead of 3.63 GHz.

Geekbench / Gsmarena

During testing, the Galaxy Tab S11 Ultra scored 2500 points in a single -core test and a little more than 8700 points in a multi -core test. For comparison, the previous model, Galaxy Tab S10 ULTRA, scored 2200 points in a single -core test and 7500 points in multi -core.

At the same time, the Galaxy Tab S11 Ultra tablet is even slower than the flagship smartphone Galaxy S25 Ultra, working on the Snapdragon 8 Elite chip. These devices scored about 3,000 points in the same -core tests and 9800 points in multi -core ones.
