

Google announced Pixel Watch 4 - the accent in the novelty was made on AI

Google introduced a new generation of smart watches Pixel Watch 4, focusing on AI and the convenience of everyday use.

Outwardly, the clock differs little from their predecessors, but inside there are serious changes. The device received a new Actua 360 dome -shaped screen with a brightness of up to 3,000 threads, 10% more useful area and more thin frames.

The operating time has grown: the 41-mm version lasts up to 30 hours, and 45 mm-up to 40. Fast charging allows you to make up for 50% in just 15 minutes.

The main innovation is the integration with Gemini, replacing Google Assistant. Now you can set complex requests, use the gesture "raised a hand - spoke" and receive more smart answers.

restoration depending on sleep or injuries.

The Pixel Watch 4 also became more repairing: the screen and battery can be replaced, ordinary screws appeared inside. Satellite SOS support without subscription and improved GPS were added.

For the 41-mm version they ask for \$ 349, and for the 45-mm option-\$ 399.
