

Before the official release of the Pixel 10 series, a week remains, but leaks on it are a dime a dozen. So, the network has already appeared estimates of new smartphones in energy efficiency and strength from the EU.

The base Pixel 10 received the rating B for energy efficiency. Its battery for 4,835 mAh provides up to 49 hours 23 minutes of work. In terms of strength, the smartphone was awarded the maximum rating a - the test withstood 270 falls without damage.

Pixel 10 Pro became the leader in general assessment, receiving A both for energy efficiency and for strength. Despite the smaller battery (4,707 mAh), thanks to better optimization it works up to 51 hours 9 minutes on one charge.

The largest in the Pixel 10 Pro XL line received the same estimates as the basic model. His battery for 5,078 mAh showed the smallest time of work - 48 hours 39 minutes.

All three models have a rating B for maintenance and protection against dust and moisture IP68. The battery resource is estimated at 1,000 full charging cycles.
