

The Gsmarena portal published the Samsung Galaxy A17 5G review and came to the conclusion that the smartphone does not justify its price. Despite the availability, the device received too many compromises.

The main claim is a weak hardware filling. Galaxy A17 5G is equipped with an outdated processor, and the basic version is limited to only 4 GB of RAM. As a result, noticeable brakes are observed in games and heavy applications.

The screen was also not impressed: low brightness makes the use of the sun problematic, and the renewal frequency is fixed - there is no automatic switch. The absence of stereodinics and the inability to recording a video in 4K were added to the disadvantages.

Nevertheless, the model has advantages: fresh and neat design, worthy photos and selfies, a microSD slot and the promised six -year support for OS updates.

But in general, according to GSMarena, Galaxy A17 5G experts do not cost their money - competitors like Redmi Note 14 Pro 5G, Poco X7 and Nothing CMF Phone 2 Pro offer significantly more at the same price.
