

HMD introduced a children's smartphone Fuse, which is looking for
and blocking nuds

HMD Global released a Fuse smartphone, created specifically for children. N

The main feature of the device is the Harmblock+system, which on the basis of AI blocks
naked content even before it falls into the phone's memory or appears in applications. The
technology is integrated directly into the OS and works in all programs.

Parents get a complete set of control tools: you can limit or approve applications, track the
geolocation of the child in real time, add contacts to the white list.

The hardware of Fuse is quite "adult". The smartphone is equipped with a 6.56-inch HD+
display with a frequency of 90 Hz, works on Snapdragon 4 Gen 2 and is available from 6 or
8 GB of RAM and up to 256 GB of built-in.

The cameras are also impressive: the main is 108 MP, the front – 50 megapixels. A 5000
mAh battery supports 33-watt charging.

Fuse is running Android 15, has IP54 protection and modular design with accessories
support.

In the UK, the smartphone is sold at Vodafone for £ 33 per month, in the future it will
