

In Russia, they presented a completely domestic drone “Wind.
Rescuer “

The design bureau “Wind” was developed by the first completely Russian drone for emergency monitoring. The device “Wind. Rescuer ”is assembled from domestic components and does not depend on imported deliveries.

The drone is designed to observe natural disasters, forest fires, floods and technogenic disasters. He transfers a real -time video broadcast and is equipped with a thermal imager for work in difficult conditions.

The flight time is 60-90 minutes, the range is up to 23 kilometers, depending on the terrain. The device is able to quickly evaluate the situation, coordinate the actions of rescuers and control recovery work.

The development is adapted for civilian tasks and needs. It is especially effective in the evacuation of people from disasters and search and rescue operations.
