

Inexpensive Honor Choice Earbuds X7 Pro with a noise and good autonomy is already sold in the Russian Federation

Russian stores went on sale wireless headphones of Honor Choice Earbuds X7 Pro. The model received a system of intellectual noise reduction, for a long time and support for modern audio technologies.

Each headphone has three microphones and the Deep Noise Cancellation 3.0 system, which reduces background noise levels to 50 dB. An algorithm based on a neural network helps to remove interference with calls, including wind noise. There are several listening modes for different conditions.

The design of the headphones includes two coaxial speakers: the main with the titanium coating and the additional of piezoelectric ceramics. This scheme allows you to play sound in the range from 16 Hz to 40 kHz. Support for the LDAC Codca and Hi-Res certificate provide audio transfer in 24-bit/96 kHz format at a speed of up to 990 kbps.

Autonomous work time without recharging reaches 8 hours, and along with the charger case - up to 38 hours. For a stable connection, the Bluetooth 5.4 chip is used, which allows you to reduce signal loss even in difficult conditions, for example in the subway.

The case is made in oval form and has an LED indicator. The weight of one headphone - 4.8 g. The sensory zones on the legs allow you to control reproduction and calls, and the retention of both legs for three seconds activates the game mode with a low sound delay. Additionally, ambushers from antibacterial silicone, wearing sensors, the ability to connect to two devices and protection against moisture and dust according to the IP54 standard are provided.
