

The German insider portal Winfuture said that in the near future Google will present new smartphone models – Pixel 10 and the folding Pixel 10 Pro Fold. Details appeared about the “cot”.

The source published the technical characteristics of the Pixel 10 Pro Fold. According to insiders, this phone will be protected from dust and moisture better than competitors. At the same level as the flagships in a standard form factor: the model will receive a gravelagellage class IP68. And this will be one of the key differences in Pixel 10 Pro Fold from other folding phones.

The battery of this folding model will have a capacity of 5015 mAh. It can be charged using a 30 W charger.

A 10.8 MP camera with a 5-fold increase will be installed in the phone. But there is information that the phone also supports a 10-fold zoom. Insiders note that this can be a marketing trick, since a standard 5-fold camera cannot give 10 times the zoom.

Also, the smartphone will receive the main camera for 48 megapixels, the ultra-high-haired-by 10.5 megapixels, a selfie camer-10 megapixels. These cameras are the same as that of last year’s folding Pixel.

Most likely, the “cot” will be equipped with a Tensor G5 processor, 16 GB of RAM and a drive of 256 GB / 1 TB. The screen will be 8 “with a brightness of up to 3,000 threads. The screen on the cover will be 6.4” also with a bright one of 3000 threads.

Pixel 10 Pro Fold will work on Android 16 and receive updates for seven years. In addition, the model will support Pixelsnap accessories and wireless charging, but there will be no charger in the kit.
