

Insiders: Samsung will change the design of the Galaxy S26 Ultra to improve cameras

Sammobile insiders said that the Galaxy S26 Ultra version will receive updated cameras; Perhaps the design will even be changed for this. Insiders emphasize that in future generations, Galaxy S Ultra Samsung will implement “significant improvements”.

According to observers, about once every two years, Samsung releases updates for its cameras. Rumor has it that Galaxy S26 Ultra will make serious changes that can affect the appearance of the device.

The last smartphone that used the side location of the cameras was Galaxy S21 Ultra. Possible improvements may include updating the main sensor and increasing the multiplicity of the zoom lens. This can lead to the fact that the Galaxy S26 Ultra design will resemble a Galaxy Note or Galaxy S series with rounded edges.

In addition, in current models, the camera module protrudes from the case. But the vendor can return to the “island” of the camera, which will provide an updated design. The “appearance” of the following generations will change and because the updating of the cameras will require more space for new components. Perhaps the case will be increased.
