

iPhone 17 Air will become thinner, but will receive a cut chip A19 PRO with 5 GPU yaders

An insider Fixed Focus Digital said that the future iPhone 17 Air will receive a chip A19 Pro with a graphic processor cut to five nuclei.

The full version with six GPU-poles, according to him, will only go to the iPhone 17 Pro models.

A decrease in the number of graphic nuclei can be due to the use of chips selected in quality or the need to reduce heat generation in a thinner case.

At the same time, for most users, the difference in performance in everyday tasks will most likely be invisible.

Information Fixed Focus Digital diverges with last year's forecast Analytics Min-Chi Kuo, who expected the iPhone 17 Air will receive a standard A19, not the Pro version.

At the same time, according to other sources, the basic iPhone 17 can be equipped with either A19 or even A18, but the final information has not yet been confirmed.

The iPhone 17 line is expected the next month, and the presentation, according to rumors, will be held on September 9.
