

Maxsun will release the Intel ARC Pro B60 Dual two -chip video card with 48 GB of memory for \$ 1200

MaxSun prepares an Intel ARC Pro B60 Dual to release a professional video card, which will receive two graphic processors and 48 GB of video memory.

According to Reddit user, the device will begin to be supplied next week, and the price will be \$ 1200.

The model is built on the GPU BMG-G21. In the Dual configuration, two chips are placed on one board, each with its eight PCIe 5.0 lines, working as separate graphic adapters. This solution is intended for computing tasks, including AI, and not for games.

Unlike classic two -chip video cards, there is no resource association for one scene - each GPU works autonomously.

Intel has not yet disclosed the official prices for ARC Pro B60, and even more so for the Dual version.
