

MSI introduced the RTX 5080 16G Expert and RTX 5070 Ti 16G Expert video cards – new models of the professional series.

The novelty based on the NVIDIA Blackwell architecture is focused on the creators of content, developers, specialists in AI and other advanced users who are important to stability and performance.

Both new items are equipped with 16 GB of memory and support DLSS 4, rays tracing and accelerated AI computers. Representatives of MSI say that they provide high rendering speed, stable multitasking and reliable work under load.

Visually, the maps are distinguished by an aluminum case in a black-gold performance with a geometric pattern and neat silver accents.

Inside is a branded Flow Frozr 2 cooling system with two fans (including StormForce FAN), a steam camera and a passive aluminum alloy radiator.

RTX 5080 Expert is positioned as a flagship for the most demanding tasks. RTX 5070 Ti Expert is a more affordable alternative with the same memory volume and a similar design.
