Novosibirsk company has created a domestic controller for conferences

The Novosibirsk Group of Companies "Computers and Networks" has developed an integrated control system for conferences, the Technoprom-2025 forum said. According to Alexander Perepelitsa, the head of the group for working with state customers, more than half of the components of the controller – domestic production.

The controller allows you to manage almost any equipment in premises of any size – from small negotiation to large optes and dispatch centers. Management is available from any device, the interface can be configured for the customer's tasks, the quail said.

He noted that foreign analogues have limited functions and are twice as expensive. The company has already submitted documents to the register of the Ministry of Industry and Trade and counts on interest from state customers.

The development provides for the full control of equipment through a convenient interface, and the case and screen of the controller are made by the company itself. The system allows you to flexibly integrate various devices.
