

NVIDIA reported on a stable increase in sales against the background

In the latest financial report for the second quarter of 2025, the head of NVIDIA Jensen Juang said that the company noted record sales, which indicates an increase in demand for AI technology.

Juang said that high rates emphasize the key role of NVIDIA in the industry, since the vendor introduces innovation and satisfies the needs of customers. According to him, the NVIDIA graphic processors are necessary for the operation of applications with artificial intelligence, including deep training and neural networks. Boom AI, covering healthcare, finance and transport, "makes NVIDIA products indispensable."

The report emphasized that record sales also reflect confidence in NVIDIA decisions from enterprises and developers. The company's commitment to research and partnerships allow it to hold a leading position.

In money, this is expressed by huge figures: NVIDIA revenue amounted to \$ 46.7 billion, which is 56% more than in the same period of 2024. Including such profit is due to the growth of the data of the data centers in which the AI dominates.
