

OnePlus 15 boasts a screen with an update frequency of 165 Hz

OnePlus 15 will be presented later this year. He, as the media writes, will work on the Snapdragon 8 Elite 2 processor and will receive other improvements compared to OnePlus 13.

According to the latest leaks, OnePlus 15 will be equipped with a screen with a resolution of 1.5K and an update frequency of 165 Hz. Judging by the insider, OnePlus tests the color version of Superblack, which will be the most black of all that we have ever seen on smartphones. According to those who saw the prototype, it looks “much better than you could imagine.”

According to previous leaks, the rear camera will receive a module with a triple camera, including the main sensor at 50 megapixels and a periscopic telephoto lens. The smartphone will be equipped with a battery with a capacity of 7000 mAh or more.
